RE: THE STUMBELBLOC BUILDING SYSTEM

In our role as consulting Architects for one of Zimbabwe's leading banks, Stumbelbloc walling construction was recently specified for a new Archives Vault. As this secure unit had to be constructed off an existing concrete floor slab, this product offered the flexibility of light weight construction necessary in addition to meeting the structural integrity and fire rating properties required. Whilst this construction product and technique were new to the appointed contractor the supplier, Stumbelbloc Zimbabwe (Pvt) Ltd, provided the necessary training which ensured that the construction process ran smoothly.

Both ourselves and the appointed consulting engineers found Stumbelbloc Zimbabwe (Pvt) Ltd to be helpful on technical matters, production of the blocks and the construction process running to programme. The finished project has been handed over to the client body who is fully satisfied with the result.

This product offers a unique construction process and my practice would specify it for future construction projects.

Yours faithfully

RICHARD BEATTIE
